

VoIP Network Assessment

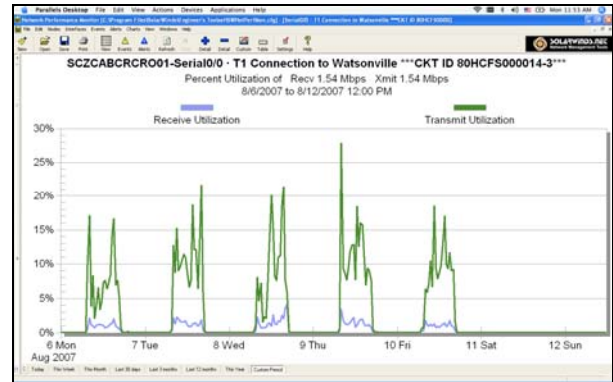

One of the most difficult aspects about implementing a VoIP phone system is preparing the data network to prioritize voice traffic properly. A network assessment is the first step to ensuring that the data network supports features such as Power over Ethernet, Quality of Service, and VLANs.

Why Choose SecureNet Services Inc. as your Technology Support Partner?

We understand that your telephone system constitutes perhaps the most critical system that businesses rely upon – when it becomes unavailable or unreliable, productivity grinds to a halt. Garbled sales calls and missing voice mails translate into lost revenues.

These are all issues that can make your company look unprofessional in the eyes of your customers:

- Gaps in phone calls
- Dropped phone calls
- Poor call quality
- Virus outbreaks
- Lost voicemails due to improper backup processes
- Hardware failure resulting in the complete loss of your phone system

Our VoIP Network Assessment can address your critical business needs by proactively determining the changes that need to be made to support VoIP:

- **Power over Ethernet**
- **Quality of Service**
- **VLAN**
- **Bandwidth utilization**
- **Network health**
- **Physical data cabling**
- **Switch and router upgrades**
- **UPS power protection**
- **Warranty service agreements**
- **Comprehensive reporting**
- **Access to a wealth of VoIP expertise, tools and experience:** Our staff has over 20 years of combined IT experience and is accredited by Shoretel, NEC, Cisco, HP, Microsoft, Novell and others. We use industry-leading management tools to provide you with the highest level of service possible
